

ABSTRACT:

A shield designed to be installed in exterior frame walls of buildings for the penetration of flexible tubing, cabling, or wiring. Comprised of a round, rectangular or square sleeve attached to mounting plate(s) or angle(s). The mounting plates or angles have holes to allow for the attachment of the shield to the framing of an exterior frame wall. The mounting plates or angles are attached to the sleeve at an angle sufficient to prevent the kinking of flexible tubing, cabling, or wiring.
